

20 Foot Containerised Generator

Our containerised generators are manufactured from COR-TEN steel for maximum strength and durability. The containers are manufactured from the ground up and are not refurbished. The name COR-TEN refers to the two distinguishing properties of this type of steel: **corrosion resistance** and **tensile strength**.

Due to our custom manufacturing of the containers, the doors, ladders, sight glasses, control panel doors, access doors and automated louvres are all customised to our customers specific needs for the best performance and security.

40 Foot Containerised Generator

Our standard sizes for containerised generators is 20 foot, 40 foot and 40 foot HQ. Custom sizes, colours and configurations are available.

Most generators start at 1000kVA in containers, however, smaller generators can also be supplied in a container if required. Fuel tanks of various sizes can also be accommodated within the container.
